

**ROBOTICS / IOT** 

### **Business Automation and Intelligence** from EDGE to Cloud

RI-DOWERD SERVICES **CREATORS STUDIO** AITHEON CORE SMART INFRASTRUCTURE

## **AITHEON | ECOSYSTEM**

# Our Mission

Aitheon's mission is to provide businesses access to business intelligence and automation by offering an easy to use platform containing all of their business system needs, while seamlessly integrating AI and Robotics in a user-friendly way.

### **Platform Overview** One platform covering all your business system needs

Aitheon's Patent Pending platform allows businesses to seamlessly connect all of their software, hardware devices, and infrastructures in one system; And easily add AI, Machine Learning and process automation to businesses using the latest cutting edge technology.

## **Al-Powered Services**

Aitheon allows businesses to work with inbuilt Alrequirement is API availability.

### Aitheon allows businesses to work with inbuilt Al-powered Services or any 3rd party applications. The only

### **AI-Powered Services** Dashboard Apps. Real-time dashboards built into **Aitheon Services**

#### Create Dashboard App In the service

Create Dashboard Applications with codeless experience using Creators Studio to track the condition of the operations and processes in that service in real time. Make management decisions with accurate real-time data to improve efficiency and optimize your business.

Edit Dashboard App Using Creators **Studio** Graphical / Low Code Experience

When Saved, the dashboard App is shown in Aitheon Core to be connected to data sources

### The real time data is displayed directly in the Aitheon Service

### Robotics / IoT Seamlessly Integrate Robots and Machines by using Device Manager

d is filled with hundreds of thousands of devices from various vendors, ring its own protocol.

to worry. Aitheon Platform helps businesses to take this patchy and onnected mess and organize it into a unified ecosystem with simple nent tools and a user-friendly interface.

r business the upper hand by incorporating robotic solutions into your rations, automating a huge number of work processes, and reaching an dented level of efficiency.

allows you to easily connect and control all your devices thanks to a of functions such as the flexible logic configuration of aggregation, and event handling in Aitheon Core.

### Robotics / IoT

### Businesses with remote operations can manage, pilot, and control robots, machines, and IoT devices from the comfort of their office.

MODEL: R2	D2	•
Speed:	0 Km/h	
Voltage:	6V	
Battery:	15%	

### **Creator Studio** Develop from EDGE to Cloud

With a low barrier to entry and an intuitive interface, Aitheon Creators Studio allows to easily create, change and support logic of business processes that control software and hardware with a Full Code or Graphical / Low Code Experience.

#### Create New Project

			×	
O App Library	0	Project Name Manufacture Station Runtime AOS Programming Language Typescript Compiler Node JS Type: EDGE		
		CANCEL	NEXT	

Full Code (Python / C++ / javascript and more soon!)

With Creators Studio all types of applications and AI/ML can immediately be deployed to the Cloud or to EDGE Hardware Devices within the same development workflow

#### Graphical / Low Code (Javascript)

Deploy to Cloud or Edge Hardware Devices in a few clicks

### Creator Studio Advantages

- Fully web-based Integrated Development
   Environment with all of the features developers love.
- Prebuilt sandbox environments let you develop complex AI and ML on any computer you are working from.
- Web IDE allows code from anywhere experience.
- Directly integrated Git Repositories for version control.

- No proprietary Coding Language, use the language you choose.
- Import existing applications and deploy them into the Aitheon Platform using a Docker container
- Built-in continuous integration -> deploy your application after each release
- Using Aitheon Core, large systems become modular and can be broken into smaller projects.

### Process Automation Focus on the process rather than writing code

With pre-built components in Creators Studio, Creating a new Automation is as easy as making a Mind Map. Deploy your new Automation by one button directly to the Aitheon Core

# Manage events and configure automatic escalations

Need to get full information and notifications about activity results or abnormal events? With Aitheon, you can easily customize the entire processing, monitoring, and responding to unforeseen situations, such as device failures, errors of external and internal services, process issues, etc.

Create Process Automation for a service in Creators studio

The new Process Automation is deployed in Aitheon Core and shown on the services automation page

## Aitheon Core pulls it all together

#### Tie together any number of services, automations, dashboards, robots and machines in a single interface

Operations, accounting, purchasing, inventory, mobile apps, messengers, robots, machines...this list goes on.

Aitheon helps to organize interaction between all of these programs and allows you to concentrate on the business instead of software integration and communication issues.

Build Parent - Child relationships between all companies, inside a group of companies, between all departments inside of one company to forget about physical distances; and tie together hardware and software to help them effectively communicate for achieving general / main goals.

Connect factories, warehouses, offline stores, online stores, offices, and any other facilities to manage processes all in one place - Aitheon Core.

# Business continuity

When unforeseen disasters strike, Aitheon keeps businesses running through seamlessly organizing workloads across available employees, AI, robots, and facilities globally to keep the company connected and operations producing.

### Integration Stages // Let's get started!

#### Exploration

### 1 week

<>

<>

<>

• Defining strategic needs and desired outcome;

> Auditing existing processes that require improvement;

Identifying key people responsible for communication with Aitheon;

Defining the criteria for success;

#### Modeling

2 weeks

Designing processes specifications;

<>

<>

<>

- Mapping out the processes;
- Defining priorities for processes improvement;

Creating automation roadmap.

#### Implementation

- Building automation flows;
- ↔ Migrating data;
- ↔ Creating end-user training;
- ↔ Setting up Mission Control team

Up to 4 weeks

#### **Testing & Launch**

Up to 3 weeks

- Verifying that automation is implemented according to the specifications;
- Conducting user acceptance testing and having key people in the organization confirm that processes are automated according to their expectations.

#### Maintenance & Support

8 weeks

- ↔ 60 days support to eliminate bottlenecks and fix issues emerging from the integration if any;
- Measuring progress according to the defined success criteria
- ↔ Making our Success Team available 24/7 for any ad-hoc consultations.
